

Digital Citizen Reflection

Presenter guide and 5-minute backup

Default allocation: 10 minutes. All demonstration examples are fictional. The PowerPoint contains editable text and embedded speaker notes. The slide PDF includes notes as comments; this guide provides a readable script.

Delivery setup

Open the activity and leave Save on this device unchecked. Select News & information, then Use fictional example. Keep the slides open for the screenshot backup. Have the one-page worksheet ready. Do not open a personal saved draft while screen sharing.

Local preview: <http://127.0.0.1:8000/pages/digital-citizen-reflection.html>

Submitted website: <https://mini34.github.io/signal-and-self/>

The new activity becomes public after the reviewed pull request is merged and the existing Pages workflow finishes.

10-minute run of show

Time	Purpose	Slides
0:00-1:00	Problem and purpose	1
1:00-3:00	Evidence and framework	2-3
3:00-7:00	Four-step demonstration	4-7
7:00-9:00	Audience reflection	8
9:00-10:00	Lessons and takeaway	9-10

Timing check

The scripts fit their allocations at about 130 words per minute, with planned click time and 90 seconds of quiet reflection in the 10-minute version. A person should rehearse aloud before the event. Use the timestamps as checkpoints and keep any extra discussion outside the speaking allocation.

01 Digital Citizen Reflection (0:00-1:00)

Think about the last thing you shared, watched, or asked an AI tool. What made it useful? What made you hesitate? Online habits can help us connect and learn, while also affecting our attention, privacy, and the information other people receive. This project gives us a way to examine one specific habit and make a small change we can actually test. It works with an example or your own observation. Today we will use a fictional news post, then you will have time to think about a habit of your own. You do not need to share personal details.

Presenter cue: Pause briefly after the opening questions. Keep this slide up for the first minute.

02 Evidence and its limits (1:00-2:00)

The activity uses original sources and puts their limits beside the findings. WHO reported signs of problematic social media use in eleven percent of the young people surveyed in 2022. The study covered almost 280,000 participants aged eleven, thirteen, and fifteen across forty-four countries and regions. That gives useful population context. It cannot diagnose one person or define a safe number of minutes for everyone. UNESCO's media literacy resources offer another kind of evidence: guidance for thinking critically about information. Guidance can help us decide how to check a post, but it does not establish whether that post is true.

Presenter cue: Point out the difference between a population finding and educational guidance.

WHO, published 25 September 2024:

03 The four-step framework (2:00-3:00)

The same four steps work across attention, privacy, news, and AI tools. Observe means describing something you actually do, and when it happens. Evaluate means looking at a source, its date, who it covers, and its limitations. Identify means naming a risk while keeping sight of a benefit you value. Act means choosing one realistic change, a way to check what happens, and a date to review it. The page suggests a review seven days ahead, but you can change it. The aim is a useful action plan rather than a score or a judgment about the person.

Presenter cue: Name each step slowly. Transition to the live page. Keep slides 4-7 available as the screenshot backup.

04 Observe: the news-sharing habit (3:00-4:00)

Here is our fictional example. A friend shares a cropped screenshot saying our city's buses will be free next month. I might want to forward it because free transport would matter to people I know. In Observe, the important detail is that the screenshot has no date or original link. I have described the situation without claiming the news is either true or false. The page labels this as a fictional example. I can edit it, or start my own reflection.

Presenter cue: Live: open the activity, select News & information, and choose Use fictional example. Read the observation, context, and notice. Backup: use this actual page excerpt and read the same observation.

05 Evaluate: what supports the claim? (4:00-5:00)

In Evaluate, the relevant sources help me think about checking information. I can see the publisher and date, then open the population and limitation section. UNESCO's guidance asks me to engage critically with information. It does not verify our fictional transport claim. I would still need a dated announcement from the transit agency, with the details and conditions. This is why comparing a finding with its limits matters. A trustworthy source can guide a process without answering every question about a particular post.

Presenter cue: Live: choose Next step. Expand Who it covers & what it cannot tell us on the UNESCO literacy card. Read the evidence response. Backup: point to the expanded source card in the screenshot.

UNESCO: <https://www.unesco.org/en/media-information-literacy>

UNESCO generative AI guidance:

<https://www.unesco.org/en/articles/guidance-generative-ai-education-and-research>

06 Identify: the risk and the benefit (5:00-6:00)

Now I identify the risk: passing along a claim before I have evidence for it. That can mislead people making plans. The benefit is still worth keeping. I want to help friends find useful transport information. Naming both makes the change more realistic. I do not have to stop sharing news to improve how I share it. The form lets participants select a risk or describe their own, and it asks them to write the benefit they want to preserve.

Presenter cue: Live: choose Next step. Point to the selected risk and benefit. Backup: read those two fields from this slide.

07 Act: a change we can check (6:00-7:00)

The change is specific: find a dated transit-agency announcement before forwarding the claim. If I cannot verify it, I will say that clearly. The check is also specific: for the next three news posts I consider sharing, note whether I found an original source. I can review that in seven days. The summary stays editable. I can download a text copy or print it. Answers remain temporary unless I enable Save on this device. Saving uses this browser only, so a shared device needs care. Clear reflection removes the draft and the current answers.

Presenter cue: Live: choose Next step, point to change/check/date, then Build my action plan. Briefly show Edit my answers, Download text, Print action plan, and the unchecked saving control. Backup: show the completed summary screenshot. Avoid opening personal drafts.

08 Your two-minute reflection (7:00-9:00)

Take two minutes for your own reflection. Use the page, the worksheet, or your own notes. Pick one habit or a fictional example. Keep names and private details out. Name a risk and a benefit to preserve. Choose one small change and a check you can observe. You can keep this private and finish later.

Presenter cue: Use 30 seconds to introduce the activity, then allow 90 seconds of quiet reflection. At 8:45, give a gentle fifteen-second notice. Do not ask participants to post their answers publicly.

09 Development lessons (9:00-9:25)

The development work made three decisions concrete. Source cards need clear limitations. Private reflection needs an explicit choice about saving. And accessibility includes what happens when someone goes back, reloads a draft, or cannot use browser storage. Those decisions shape whether a participant can complete the activity.

Presenter cue: Describe the demonstrated design decisions. Add personal experiences only if Mina has confirmed them.

10 One change, then a review (9:25-10:00)

The takeaway is a repeatable process: observe a habit, evaluate the evidence, identify a risk and a benefit, then act. Keep the benefit you value, try one change, and review what actually happened. The worksheet has the same four steps. The activity is part of Signal & Self, using the submitted website link. Thank you.

Presenter cue: Show the worksheet and website address. End by 10:00. The existing public link will gain the activity after the reviewed change is published.

5-minute condensed script

Use slides 1-3 briefly, screenshots on slides 4-7 for the demonstration, and the worksheet during the audience minute. Skip slide 9. The time labels on the main deck refer to the 10-minute talk. Follow the checkpoints below for the condensed version.

Screenshot backup

The screenshots reproduce the real fictional news example. The large editable text on slides 4-7 carries the observation, evidence limit, risk, benefit, and action. If the browser is unavailable, read those slides and use the worksheet. No live connection is needed for the local PDF or PowerPoint.

0:00-0:45 Problem and purpose

Think about the last online habit you wanted to change. What helped you, and what got in the way? Digital Citizen Reflection helps you examine one habit and choose a small change you can check. You can use your own observation or a fictional example. Your answers can remain private, and the page does not require sign-in. The same process works for attention, social media privacy, news, and AI tools.

0:45-1:30 Evidence and framework

The four steps are Observe, Evaluate, Identify, and Act. In Evaluate, compare the source and date with the population and limitations. A WHO survey offers population context about adolescent social media use, but it cannot diagnose an individual or set a universal safe number of minutes. UNESCO's literacy guidance helps us think critically about information, but a particular claim still needs its own evidence. The last step is one change, one observable check, and a review date.

1:30-3:30 Screenshot demonstration

Our fictional example is a cropped post claiming city buses will be free next month. Observe: the screenshot has no date or original link. Evaluate: UNESCO's guidance helps us ask for the source and context, but neither evidence card verifies this fictional claim. We would need a dated transit-agency announcement. Identify: the risk is sharing an unsupported claim. The benefit we want to keep is helping friends find useful transport information. Act: check for a dated announcement before forwarding. If we cannot verify the claim, say that clearly. For the next three posts, note whether an original source was available, then review in seven days. The page creates an editable summary that you can download or print. It keeps answers temporary by default. Save on this device is optional and uses this browser only. These screenshots show the same example if the live page is unavailable.

3:30-4:30 Audience reflection

Take one minute to choose a habit or example. Name the risk, the benefit to keep, and one change. How would you check it? Use the worksheet or your own notes. Keep this private.

4:30-5:00 Takeaway

Keep the benefit, try the change, and review what actually happened. The four steps give you a process you can use again. The worksheet matches the page, and the project sits at the submitted Signal & Self address. Thank you.
